

# VINDVITTRANS MAXIMUS

## Veterinary Report by Embark

embarkvet.com

Test Date: April 21st, 2025

### Customer-supplied information

Owner Name: Mikko Parviainen

Dog Name: Vindvittrans Maximus

Sex: Male (intact)

Date of birth: 12/22/24 (Estimated)

Breed type: purebred

Breed: East Siberian Laika

Breed registration: N/A SE12959/2025

Microchip: N/A

### Genetic summary

Genetic breed identification:

**East Siberian Laika**

Predicted adult weight: **54 lbs**

Calculated from 17 size genes.

Breed mix:

**East Siberian Laika: 100.0%**

Life stage: **Puppy**

Based on date of birth provided.

# Health Report

## How to interpret Vindvittrans Maximus's genetic health results:

If Vindvittrans Maximus inherited any of the variants that we tested, they will be listed at the top of the Health Report section, along with a description of how to interpret this result. We also include all of the variants that we tested Vindvittrans Maximus for that we did not detect the risk variant for.

### A genetic test is not a diagnosis

This genetic test does not diagnose a disease. Please talk to your vet about your dog's genetic results, or if you think that your pet may have a health condition or disease.

### Summary

Of the 274 genetic health risks we analyzed, we found 2 results that you should learn about.

#### **Notable results** (2)

##### **ALT Activity**

##### **Primary Open Angle Glaucoma**

#### **Clear results**

##### **Other** (271)

# Health Report

## OTHER RESULTS

Research has not yet linked these conditions to dogs with similar breeds to Vindvittrans Maximus. Review any increased risk or notable results to understand his potential risk and recommendations.

<input type="radio"/> -	ALT Activity (GPT)	Notable
<input type="radio"/> -	Primary Open Angle Glaucoma (ADAMTS10 Exon 17, Beagle Variant)	Notable
<input checked="" type="radio"/>	2-DHA Kidney & Bladder Stones (APRT)	Clear

## HEALTH REPORT

### Notable result

#### ALT Activity

Vindvittrans Maximus inherited both copies of the variant we tested for Alanine Aminotransferase Activity

#### Why is this important to your vet?

Vindvittrans Maximus has two copies of a variant in the GPT gene and is likely to have a lower than average baseline ALT activity. ALT is a commonly used measure of liver health on routine veterinary blood chemistry panels. As such, your veterinarian may want to watch for changes in Vindvittrans Maximus's ALT activity above their current, healthy, ALT activity. As an increase above Vindvittrans Maximus's baseline ALT activity could be evidence of liver damage, even if it is within normal limits by standard ALT reference ranges.

#### What is Alanine Aminotransferase Activity?

Alanine aminotransferase (ALT) is a clinical tool that can be used by veterinarians to better monitor liver health. This result is not associated with liver disease. ALT is one of several values veterinarians measure on routine blood work to evaluate the liver. It is a naturally occurring enzyme located in liver cells that helps break down protein. When the liver is damaged or inflamed, ALT is released into the bloodstream.

#### How vets diagnose this condition

Genetic testing is the only way to provide your veterinarian with this clinical tool.

#### How this condition is treated

Veterinarians may recommend blood work to establish a baseline ALT value for healthy dogs with one or two copies of this variant.

# Health Report

## HEALTH REPORT

### Notable result

#### **Primary Open Angle Glaucoma**

Vindvittrans Maximus inherited one copy of the variant we tested for Primary Open Angle Glaucoma

#### **What does this result mean?**

This variant should not impact Vindvittrans Maximus's health. This variant is inherited in an autosomal recessive manner, meaning that a dog needs two copies of the variant to show signs of this condition. Vindvittrans Maximus is unlikely to develop this condition due to this variant because he only has one copy of the variant.

#### **Impact on Breeding**

This result is also important if you decide to breed this dog - to produce the healthiest puppies we recommend genetic testing any potential mates for this condition.

#### **What is Primary Open Angle Glaucoma?**

Glaucoma is the result of high intraocular pressure, and if left untreated, can lead to pain and vision loss. The "angle" of primary open glaucoma (POAG) refers to the intersection of the cornea and the iris: this is where aqueous humor (clear fluid filling the eye) must flow to exit the eye. In open angle glaucoma, the iridocorneal angle remains unchanged, and other factors contribute to increased resistance to outflow.

#### **When signs & symptoms develop in affected dogs**

Glaucoma has an adult onset.

#### **How vets diagnose this condition**

Veterinarians perform a complete ocular exam and use a device to measure the intraocular pressure of the eye to diagnosis glaucoma. At risk dogs are often tested at their yearly exam.

#### **How this condition is treated**

With early diagnosis, glaucoma can be managed with a variety of medical and surgical options. In severe end-stage cases, surgical removal of the affected eyes may be indicated.

#### **Actions to take if your dog is affected**

- While both eyes are usually affected with glaucoma, one is often affected before the other. In these cases, many studies indicate that prophylactic treatment of the unaffected eye can significantly prolong its health and vision.
- Left untreated, the unaffected eye usually develops glaucoma within a year, whereas prophylactic treatment can extend the health of

the eye to two and a half times that.

# Genetic Diversity and Inbreeding

## Coefficient of Inbreeding (COI)

**Genetic Result:** 15%

Our genetic COI measures the proportion of your dog's genome (his genes) where the genes on the mother's side are identical by descent to those on the father's side. The higher your dog's coefficient of inbreeding (the percentage), the more inbred your dog is.

## Your Dog's COI

This graph represents where your dog's inbreeding levels fall on a scale compared to both dogs with a similar breed makeup to him (the blue bars) and all purebred dogs (the grey line).

## More on the Science

Embark scientists, along with our research partners at Cornell University, have shown the impact of inbreeding on longevity and fertility and developed a state-of-the-art, peer-reviewed method for accurately measuring COI and predicting average COI in litters.

# About Embark

---

Embark Veterinary is a canine genetics company offering research-grade genetic tests to pet owners and breeders. Every Embark test examines thousands of genetic markers, and provides results for over NaN genetic health conditions, breed identification, clinical tools, and more.

Embark is a research partner of the Cornell University College of Veterinary Medicine and collaborates with scientists and registries to accelerate genetic research in canine health. We make it easy for customers and vets to understand, share and make use of their dog's unique genetic profile to improve canine health and happiness.
